

## INFORMATION ON BLUE/GREEN ALGAE BLOOM

The Association has tried to pull together as much information as possible to inform you of the issue related to the recent discovery of Algae Bloom on the lake. The bloom can be toxic to people and pets and is released as the bloom dies or is disturbed (ie: swimming or doing water sports in the area of the bloom).

In our telephone conversations with the Ministry of Health since the algae bloom was first reported, they have told us that they do not intend to do any further testing on the lake this year.

We hope you will find this information useful.
